Paper Proof Service - Your colors verified

In the printing industry, paper proofs are used to check and verify the accuracy of images of one or more colors. Proofs are an easy way to adjust printing machines to ensure the matching of colors. Our Paper Proof Service is perfect for your important projects because it allows you to see what the finished product will look like before your graphic is ever sent to our printing facility.

With our state of the art equipment we are now proud to offer you the following services:

- 1. **Paper-Proof** for fabric digital printing
 - Digital Chemical Dye Printing (DCD)
 - Digital Transfer Dye Printing (DTD)
 - (with color simulation)

Before printing accurate colors on fabric, we need a reference sample (proof) from the customer. We will be happy to provide this service to you.

Your advantage:

Before printing your image with Digital Chemical Dye Printing (DCD) or Digital Transfer Dye Printing (DTD) we can simulate the colors of your image based on the graphic file that you provide. This will allow you to see and verify the colors even before production starts. If necessary, color adjustments are possible.

A paper proof is a cost effective alternative when compared with an actual production sample and can arrive at you location as quickly as the next business day.

- 2. **Paper-Proof** for fabric screen printing
 - Chemical Screen Dye Printing (CSD)
 - (no color simulation)

For most screen printing jobs we can exactly match colors according to Pantone definitions provided by you. If no Pantone colors are available or the graphic is a four color process artwork we need a reference sample (proof) before printing accurate colors. We will be happy to provide this service to you.

Your advantage:

Before printing your image with Chemical Screen Dye Printing (CSD) we can print a paper proof using the ISOcoated profile. This will allow you to see and verify the colors even before production starts. If necessary you can make changes and adjust colors. **Note: For screen printing the proof does not simulate the actual printing colors! We will only use the paper proof to adjust the screen printing colors as close as possible. However, differences in color may occur! The different screen resolutions will also not be simulated on the paper proof. If you are not familiar with our product or production processes we strongly recommend an actual pre-production sample!**

A paper proof is a cost effective alternative when compared with an actual production sample and can arrive at you location as quickly as the next business day.

- 3. **Paper-Proof** as a separate service

We will be happy to print proofs according to ISOcoated profile for your own use.

Technical Information from Tex Visions

Reference profile (screen print):	ISOcoated.icc
Reference profile (digital print):	[Fabricname].icc
Paper type:	EFI Proof Premium Paper 8260 Semiglossy
Ink:	Ultra Chrome Photo
Printer:	Epson Stylus Pro 4000 8c

Note: All files must be EPS, PDF, or TIF format.

Price		
Proof size	Price	Shipping
Letter (8.5" x 11")	\$42.00	\$20.00
Tabloid (11" x 17")	\$84.00	\$32.00
